DETAILED ACTION
EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Frank Cire on 6/18/2010.

The application has been amended as follows:

16. (Currently Amended) A non-transitory computer-readable storage medium storing a ~~program stored on a computer-readable recording medium~~, for causing a computer to execute a method of controlling a print system comprising an external operating apparatus, a host computer which communicates with said external operating apparatus, and a printer which communicates with said host computer,

wherein said method includes a control method for said external operating apparatus and comprises the steps of:

reading out image data from a detachable storage medium;

displaying a print setting screen on a display unit;

setting, with an operation panel, print settings in accordance with a print setting instruction provided by a user based on the print setting screen displayed on the display unit;

operating a button to instruct said host computer to preview the image data read out in said reading step;

transmitting the image data read out in said reading step, to said host computer in response to said button being operated; and

generating a plurality of interruption events including a print setting information interruption event for causing said host computer to set therein the print settings of the image data transmitted in said transmitting step, the print setting information interruption event being generated in accordance with the print settings being set in said setting step after the image data read out in said reading step is transmitted to said host computer in said transmitting step so that the generated print setting information interruption event includes the print settings set in said setting step and is transmitted to said host computer,

wherein said method further includes a control method for said host computer and comprises the steps of:

receiving the image data read out in said reading step and then transmitted in said transmitting step, and receiving the plurality of interruption events generated in said generating step;

detecting whether the interruption event received in said receiving step is the print setting information interruption event, and controls print preview display such that

Art Unit: 2625

the print settings included in the received print setting information interruption event are reflected in the image data received in said image data receiving step, every time the print setting information interruption event is detected; and

generating print data corresponding to the print settings included in the received print setting information interruption event,

wherein said method further includes a control method for said printer by which said printer prints the print data output from said host computer, and

wherein the print settings reflected in the print preview display are the same print settings used to generate print data.

18. (Currently Amended) A non-transitory computer-readable storage medium storing a program~~stored on a computer-readable recording medium~~, for causing a computer to execute a method of controlling an information processing apparatus which can communicate with an external operating apparatus including reading means for reading out image data from a detachable storage medium, a display unit which displays a print setting screen, an operation panel which is operative to set print settings in accordance with a print setting instruction provided by a user based on the print setting screen displayed on the display unit, a preview button operative to instruct said information processing apparatus to preview the image data read out by said reading means, transmission means for transmitting the image data read out by said reading means, to said information processing apparatus in response to said preview button being operated, and a controller for generating a plurality of interruption events including a

Art Unit: 2625

print setting information interruption event for causing said information processing apparatus to set therein the print settings of the image data transmitted by said transmission means, the print setting information interruption event being generated in accordance with said operation panel setting the print settings after the image data read out by said reading means is transmitted to said information processing apparatus by said transmission means so that the generated print setting information interruption event includes the print settings set by said operation panel and is transmitted to said information processing apparatus, and a printer, said method comprising the steps of:

receiving the image data and the plurality of interruption events transmitted from said external operating apparatus;

detecting whether the print setting information interruption event is received in said receiving step and controlling the print preview display such that the print settings included in the received print setting information interruption event are reflected in the image data received in said receiving step, every time the print setting information interruption event is detected; and

generating print data corresponding to the print settings included in the received print setting information interruption event and outputting the generated print data to said printer,

wherein the print settings reflected in the print preview display are the same print settings used to generate print data.

Allowable Subject Matter

2. Claims 1-3, 9, 10, 13, 15, 16, 18 and 19 are allowed.
3. The following is an examiner's statement of reasons for allowance: The invention relates to control of a print system in which an external apparatus, a printer and a host computer communicate through an interface to print a print job. Specifically, the external operating apparatus communicates image data and print setting instructions to a host computer to view the image data on the host computer and to later view the print setting changes after these setting changes are transmitted after the transmission of the image data. The printer prints out the desired print result. As disclosed on pages 20 and 21, the applied references do not disclose the feature of sending a print setting from the camera to the host computer for causing a host computer to set therein the print settings of the image data that was transmitted earlier in the transmission process. The searched and applied prior art is believed to not disclose the feature of first transmitting image data to a host computer without the print settings and then after the image data has been transmitted to the computer, to then transmit print setting information to be applied to the transmitted image data and previewed on the host computer monitor. Therefore, the Examiner considers the claim limitations allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
